Summary

Computer Science undergraduate (Class of 2027) building reliable, secure full-stack applications with React, TypeScript, Node.js, Express, MongoDB and PostgreSQL; strong in Java and OOP. Delivered BillMate, a PWA with atomic PostgreSQL transactions, and TuneSense, an explainable recommendation system. Seeking full-time Software Development Engineer roles.

Education

Vellore Institute of Technology, Vellore 2023 – 2027
B.Tech, Computer Science Engineering | CGPA: 8.48
Narayana CO Campus, Bangalore – Class XII (Karnataka State Board), 88% 2023

Skills

Languages: Java, JavaScript, TypeScript, C++, SQL, Python (basic)
Backend: Node.js, Express, MERN Stack, REST APIs, JWT Authentication, Mongoose, Zod, Supabase
Frontend: React, Vite, React Router, Tailwind CSS, HTML, CSS, Progressive Web Apps (PWA)
Databases: MongoDB, PostgreSQL, Supabase, SQLite, NoSQL Data Modeling, Relational Schema Design
Testing & Tools: Unit Testing, Vitest, Git, GitHub, Vercel, Render
CS Fundamentals: Data Structures & Algorithms, Object-Oriented Programming

Projects

BillMate – Point-of-Sale & Retail Management System | Live Demo | GitHub
Tech Stack: React 19, Vite, Supabase, PostgreSQL, PWA, Vitest, Vercel

- Developed a mobile-first PWA covering billing with camera barcode scanning, inventory, customer credit ledger, supplier and expense tracking, with offline caching
- Engineered atomic sales and inventory updates using PostgreSQL RPC functions, preventing stock and sales desync, and secured multi-user data with Supabase Auth and Row-Level Security
- Structured data access into reusable service modules with Vitest unit tests; auto-deployed on Vercel

TuneSense – Explainable Music Recommendation System | Live Demo | GitHub
Tech Stack: React, Vite, TypeScript, Node.js, Express, MongoDB (Mongoose), Zod, JWT, Tailwind CSS

- Implemented a music recommendation REST API with six composable strategies (popularity, content, behavioural, contextual, hybrid/mood and collaborative filtering) that return a human-readable reason for each song
- Designed 11 Mongoose schemas using materialized views, append-only event logs, compound indexes and aggregation pipelines for listening telemetry and cosine-similarity peer matching
- Secured the API with JWT sessions in HttpOnly cookies, bcrypt hashing, Zod validation and ownership checks; deployed the client on Vercel and the API on Render
- Authored staged verification suites and an offline evaluation framework (Precision@K, Recall@K, NDCG)

Campus ClubHub – Student Club & Event Portal | GitHub
Tech Stack: React 19, TypeScript, Vite, Tailwind CSS

- Developed role-segregated student and organizer authentication flows based on institutional email domains, with digital event passes using real-time SVG QR codes and Google Calendar/.ics sync
- Created an organizer console with live registration KPIs, real-time attendee rosters and CSV export

Audit Analytics & Anomaly Detection System
Tech Stack: Python, SQL (SQLite), Streamlit

- Analyzed 8,000 ledger transactions ($13.7M) using a SQLite schema, SQL data-quality checks, Benford's Law and rule tests to flag 206 threshold-avoidance transactions, 168 duplicate invoices and 122 weekend postings

Experience

Marketing Intern, Edvensoft Solutions May 2025 – June 2025

- Analyzed 10+ competitors and campaign performance data to support campaign strategy and decision-making

Leadership

Co-Secretary, Matrix – The Multimedia Club Jan 2025 – Jan 2026

- Led 10+ members across 10+ events and workshops reaching 100+ participants

Organizing Committee Member, Riviera / GraVITas, VIT Sep 2024 – Present

- Coordinated fest logistics and cross-team operations
